

Computer-assisted registration techniques for endopancreatic surgery

Benjamin Eigl, Caroline Haslebacher, Philip Müller

Overview

- Minimally invasive technique
- Resection inside the pancreatic duct
- Rigid endoscope (Karl Storz)
 - Decreased field of view
 - Lack of haptic feedback

Goal

- Computer-assisted resection guidance

(A-234), Benjamin.eigl@cascination.com

Methods

- Navigation system
 - Optical tracked laparoscope and US
- Pancreas phantom
 - Surrounding risk structures
 - CT and US characteristics
- Evaluation of registration techniques
 - Surface
 - Internal
 - Hybrid

Results

- Trained medical professional

Approach	Fiducial Registration Error	Time
Surface	3.46 mm	01:51 min
Surface and intraparenchymal	2.46 mm	02:12 min
Intraparenchymal	2.24 mm	02:58 min

Median, n = 5

Conclusion

- Ultrasound registration suitable for resection of tumour (see more in A-174)
